SUMMARY

Computer Science major experienced in general software development, as well as game and web development, and cybersecurity. Previous intern at Google, Boeing, Almaprism; interested in creative and technical work.

EDUCATION

University of California, Los Angeles

Bachelor of Science in Computer Science

Estimated Graduation June 2028

- GPA: 3.5
- Relevant Coursework: Data Structures and Algorithms, Software Construction, Programming Languages, Operating Systems Principles, Algorithms and Complexity, Computer Graphics
- Clubs: Society of Women Engineers, Mechanical Keyboards, ACM Cybersecurity, Chinese Cultural Dance, Wushu

EXPERIENCE

Game Programmer Intern

June 2026 - September 2026

Almaprism

Kyoto, Japan

- Worked in C# to implement developer tools for Unity 3D, including debug scene selection and reload, performance metrics overlay, free camera/movement mode, and more
- Wrote scripts dictating cutscene transition animations and behaviors; presented developer tools to internal team members and external developer team

Assistant Software Development Intern

June 2025 - September 2025

Google

Mountain View, CA

- Worked with Google Payments to simplify external integration with Google Catalog, to be used by 8 integrators
- Designed and Implemented Java-based frontend, wrote design docs, presented to internal team members

Systems Engineering Intern

June 2023 - August 2023

The Boeing Company

Huntington Beach, CA

- Designed and implemented a physics-based computer simulation to optimize radars, radios, satellites, and aircraft usage in different aerospace defense scenarios.
- Completed cost-benefit analysis for various defense scenario simulations, presented internally

PROJECTS

ClubhouseBruins | *React.js, Node.js*

- Worked with student developer team to implement user profiles, personalized recommendations, etc for UCLA student organization review platform serving 500+ monthly users
- Built dynamic API routes, optimized query logic to Supabase

405 Run | *Three.JS*

- Built "Endless Runner" game in browser, implemented realistic physics, environmental lighting, obstacles

Gacha Get-It-Done | *Node.js/Express.js, MySQL, Axios, React.js, Git*

- Worked collaboratively on a task and habit manager with a gamified gacha (random reward) component and social functions
- Connected database to backend, collaborated on login and registration backend implementation

Dungeon Crawler | *Unity3D, C#*

- Built a rough dungeon crawling game with a procedurally generated maps; Implemented sprite billboard with the player character

Medication Tracker | *Java, Jswing*

- Built a planner application for clients that need to keep track of scheduled medications and supplements.

TECHNICAL SKILLS

Languages: Java, C/C++, C#, Python, JavaScript, SQL, CSS, HTML

Frameworks: React, Node, Next.js; Familiar with Three.JS, OpenGL

Developer Tools: Git/Github, Linux/Bash, Google Cloud Platform, VS Code, Visual Studio, Unity (3D)
